                                                                                                                 AAW39818-20 represent the sequences of the light chain complementarity determining regions (CDRs) of the catalytic antibody 6A12, which is able to degrade cocaine. A series of cocaine transition state analogues (TSAs) were prepared and used to immunise mice for production of release 3H-benzoic acid from 3H-phenyl cocaine. The 6A12 antibody was identified using TSA1, which is an immunogenic conjugate of a phosphate monoseter transition state analogue. Antibody 6A12 has a per minute Kcat of 0.072. The antibodies reduce the concentration of cocaine in a subject, and are used particularly for the treatment of an overdose. They are also used for treating addiction (by reducing the in vivo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAW39821-23 represent the sequences of the light chain complementarity determining regions (CDRs) of the catalytic antibody 2A10, which is able to degrade cocaine. A series of cocaine translition state analogues (TSAs) were prepared and used to immunise mice for production of hybridomas. Catalytic antibodies were identified by their capacity to release 3H-benzoic acid from 3H-phenyl cocaine. The 2A10 antibody was

This sequence represents complementarity determinating region 2
(CDR L2) of the light chain of murine anti-CD23 (FCERII) monoclonal
antibody Cl1 (see also ANY32262). The invention provides altered
antibodies, such as chimeric or humanised antibodies, which comprise
Sufficient of the amino acid sequences of Cl1 light and heavy chain
CDRs (see ANY32254-59) to render them capable of binding to the CD23
CDRs (see ANY32254-59) to render them capable of binding to the CD23
CDRs (see ANY32254-59) to render them capable of binding to the CD23
CDRs (see ANY32254-59) to render them capable of binding to the CD23
CDRs (see CDRS soluble CD23 formation for treatment of arthritis,
lupus erythematorsus, Hashimoto's thyroiditis, multiple sclerosis,
clubus erythematorsus, Hashimoto's thyroiditis, unitiant nephrotic
syndrome, glomerulonephritis, inflammatory bowel disease, ulcerative
collits, Crohn's disease, Sjogren's syndrome, allergies, allergic
cathma, intrinsic asthma, acute asthmatic exacerbation, rhinitis,
eczema, graft-versus-host disease, CODD, insulltis, bronchitis
(particularly chronic bronchitis) or diabetes (particularly type 1
for studying interactions between CD23 and various ligands and
chermining the binding agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cell receptor specific antibodies useful for treating e.g. arthritis, diabetes, multiple sclerosis and psoriasis -

AAW39815-17 represent the sequences of the light chain complementarity determining regions (CDRs) of the catalytic antibody 3B9, which is able to degrade cocaine. A series of cocaine transition state analogues (TSAs) were prepared and used to immunise mice for production of hybridomas. Catalytic antibodies were identified by their capacity to release 3H-benzoic acid from 3H-phenyl occaine. The 3B9 antibody was identified using TSA1, which is an immunogenic conjugate of a phosphate monoester transition state analogue. Antibody 3B9 has a per minute Kcat of 0.11. The antibodies reduce the concentration of cocaine in a subject, and are used particularly for the treatment of an overdose. They are also used for treating addiction (by reducing the in vivo concentration that

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAW39875-77 represent the sequences of the light chain complementarity determining regions (CDRs) of a catalytic antibody which is capable of degrading occaine. A series of cocaine transition state analogues (TSAs) were prepared and used to immunise mice for production of hybridomas. Catalytic antibodies were identified by their capacity to release 3H-benzoic acid from 3H-phenyl cocaine. These antibodies were found to have CDRs of the present sequence. The antibodies reduce the concentration of cocaine in a subject, and are used particularly for the treatment of an overdose. They are also used for treating addiction (by reducing the in vivo concentration that can be achieved).

The invention relates to transforming a population of cells (e.g. plant cells), comprising using a library of two different polynucleotides encoding different immunoslobulin binding protein (198P) polypeptides that specifically bind to a ligand or form one or more disulphide bonds with polypeptides in transformed cells, to generate an IgBP that binds to a ligand, and transformed plant cells are selected, and at least 75% sequence identity to a framework region (FR) of a native in IgB, IgB, IgB, kappa or lambda immunoslobulin molecule. The method is useful for preparing an immunoslobulin binding protein. The method is useful for preparing an immunoslobulin binding protein. Carray, preferably heavy chain binding protein (CHBP) array in eukaryotic cells especially plant cells (e.g. Agrobacterium tumefaciens or maize) or other eukaryotic cells (e.g. insect cells or mammalian cells). The CHBP is useful for discovery of e.g. screening assays of IgBPs having desired characteristics. The present sequence is a mammalian can IgBP of immunoslobulin derived peptide that may be incorporated into an IgBP of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Amino acids encoded by 5' portion of pTugAS vector SacI-HindIII region.
                                                                                                                                                                                                                                                                                                                                                                                                         Preparing immunoglobulin binding protein array in plant cells by transforming the cells with different polynucleotides encoding binding protein polypeptides specific to ligand, selecting plant cells for

The invention relates to a novel two-phase partition system for affinity which comprises a phase-forming oligosaccharide polymer to which a polyaccharide binding peptide (FBP) binds, and a phase to which a polyaccharide binding peptide (FBP) binds, and a phase to sparation inducing agent. The system may be used for the separation and purification of recombinant proteins from cheal cultures. The protein of interest is expressed in the host cell as a fusion protein with a conformation system. The fusion protein partitions into the polyaccharide binding peptide, and the cell lysate or fermentation of conformation system. The fusion protein partitions into the coligosaccharide bolymer phase, and can then be isolated e.g., via the case of a solution with a low ionic strength, high pl or containing a chaotropic agent, or by the use of chemical cleavage agents such as chaotropic agent, or by the use of chemical cleavage agents such as chaotropic agent, or by the use of chemical cleavage agents such as chaotropic agent, or by the use of chemical cleavage agents such as chaotropic agent, or by the use of chemical cleavage agents such as chaotropic agent, or by the use of chemical cleavage agents such as chaotropic agent, or by the use of chemical cleavage agents such as chaotropic agent, or by the use of creaming the protein can be cleaved from the PBP and the invention include a wide variety of medically and industrially important proteins e.g., interleving the method of the invention include a wide variety of medically and industrially impuring that receptor can be used for cell separation and/or enrichment of a ligan of a particular receptor can be used to isolate cells comprising that receptor can be used to isolate cells comprising that receptor can be used to isolate cells compressed polymer makes it suitable fellulosic substrates offer a new, cost-effective, highly flaxible affinity partition systems continuous purification. Selective binding of EPP from the collapsaccharide polymer makes it suitable for purifica
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Two-phase partition affinity separation system useful for separating and purifying proteins comprises a phase-forming oligosaccharide polymer and a phase-separation agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ļ

```

The invention relates to an antiHBs monoclonal antibody having the following properties: (A) CDR-3 of H chain variable region; (B) it contains no Epstein Barr virus (EBV); (C) it binds at least one adr type among human HBs antigens. The antiHBs monoclonal antibody is high in antibody titer and has low risk of EBV contamination. It can be used to prevent hepatitis C.

Anti-HBs monoclonal antibody - produced without the risk of Epstein

The present invention describes a method for detecting a retroviral genetic recombinant having agg and pol functions, involving a cell suspected of having a recombinant and propagating the recombinant in the presence of any necessary helper functions. This is useful as it enables the detection of vectors which are able to replicate in the host cell, and allows the production of vectors suitable for gene therapy. The present sequence is a peptide fragment used to demonstrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence may be fused to the haemagglutinin 2 (HA2) fragment (amino acids 66-222) of influenza A and the resulting fusion protein used in a vaccine. The purpose of this particular sequence is not given in the specification although such additional peptides to the virus antigen may contain another influenza antigen or other antigen or confer some advantage upon expression of the HA2 peptide. Alternatively the fusion peptide may comprise a sequence which is selectively cleavable by a proteolytic enzyme or upon exposure to a
                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                               셤
                                                                                                                                                                                                             This sequence represents a light chain complementarity determining region (CDR) from a tumour antigen specific antibody.

The invention relates to a method for identifying a binding molecule having selective affinity for a ligand comprising; a) selectively immobilising a diverse population of binding molecules to a solid support, (b) simultaneously contacting the diverse population immobilised on the solid support with 2 or more Ifgands; and (c) determining at least one binding molecule which selectively binds to one or more of the identification of binding molecules which selective afficient methods for the identification of binding molecules which exhibit selective affinity for one or more ligands of interest. They are used particularly for identifying tumour-specific binding polypeptides which can be used as targeting agents for cancer therapy that minimises impact on non-tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

Tumour antigen, antibody, CDR, complementarity determining region; binding molecule identification; tumour-specific binding polypeptide; cancer therapy; light chain.
                                                                                                                                                                                                                                                                                                                                                     AAW31170-W31181 are peptides derived from various gentoypes of hepatitis C virus. The peptides were used for the production of PCR (polymerase chain reaction) primers used for discrimination between hepatitis C virus (HCV) genotypes. Classification of the genotype of HCV can be achieved precisely and simply according to the international Standardisation of Classification. The primers can be used to distinguish between HCV genotypes la, lb, 2a, 2b, 3a, 3b, 4, 5a, 6a and 6b.
                                                                                                                                                                                                                                                                          Primers used for determining hepatitis C virus genotype - provide a rapid and accurate method of hepatitis C virus genotyping
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score 18; DB 18; Lengtn /, Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         An antigen binding structure is based on the CDRs (given in AAR76078-84) of the heavy and light chains of MAD 55.1 (ECACC 93081901), which recognises the colorectal tumor-associated antigen CAS5.1. It is optionally humanized and in the form F(ab')2, F(ab)', FV, SCFV or V-min, and is produced in transgenic animals or plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

This sequence represents a light chain complementarity determining region (CDR) from a tumour antigen specific antibody.

The invention relates to a method for identifying a binding molecule having selective affinity for a ligand comprising; (a) selectively immobilising a diverse population of binding molecules to a solid immobilising a diverse population of binding molecules to a solid on the solid support with 2 or more ligands; and (c) determining at least one binding molecule which selectively binds to one or more of the ligands. The method allows for the rapid and efficient methods for the identification of binding molecules which exhibit selective affinity for one or more ligands of interest. They are used particularly for identifying tumour-specific binding polypeptides which can be used as transeting agents for cancer therapy that minimises impact on non-tumour
                   Identifying binding molecules for ligands, particularly tumour antigens - by selectively immobilising a population of binding molecules to a solid support and screening for binding to two or more ligands
                                                                                                                                                   Claim 15; Page 57; 80pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 10, Application US/10146305
Patent No. US2002013035A1
GENERAL INFORMATION:
APPLICANT: VURAN CORPORATION
TITLE OF INVENTION: A VARIABLE REGION OF THE MONOCLONAL ANTIBODY AGAINST THE HBV
TITLE OF INVENTION: S-SURFACE ANTIGEN AND A GENE ENCODING THE SAME
FILE REFERENCE: OV17440
CURRENT APPLICATION NUMBER: US/10/146,305
CURRENT PILING DATE: 2002-05-15
PRIOR APPLICATION NUMBER: KR 10-2001-26634
PRIOR PILING DATE: 2001-05-16
NUMBER OF SEQ ID NOS: 14
SOFTWARE: KOPATENTI I.71
                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       APPLICANT: RUP, BONITA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ઠે
US-09-800-433-8
; Sequence 8, Application US/09800433
; Sequence 8, Application US/09800433
; Patent No. US20020106378A1
; GENERAL INFORMATION:
; APPLICANT: O'Hare and Elliott
; TITLE OF INVENTION: Materials and methods for intracellular transport and
; TITLE OF INVENTION: their uses
; TITLE OF INVENTION UNMER: US/09/800,433
; CURRENT APPLICATION NUMBER: US/09/800,433
; CURRENT PILING DATE: 1999-09-13
; NUMBER OF SEQ ID NOS: 11
; SOFTWARE: Patentin Ver. 2.0

determining regions (CDRs) of the catalytic antibody 2A10, which is able to degrade cocaine. A series of cocaine transition state analogues (TSAs) were prepared and used to immunise mice for production of release 3H-benzola and used to immunise mice for production of release 3H-benzola and used to all-phenyl cocaine. The 2A10 antibody was identified using TSA1, which is an immunogenic conjugate of a phosphate monester transition state analogue. Antibody 2A10 has a per minute Kcat of 0.011. The antibodies reduce the concentration of cocaine in a subject, and are used particularly for the treatment of an overdose. They are also used for treating addiction (by reducing the in vivo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAW39815-17 represent the sequences of the light chain complementarity determining regions (CDRs) of the catalytic antibody 3B9, which is able to degrade cocaine. A series of cocaine transition state analogues (TSMs) were prepared and used to immunise mice for production of hybridomas. Catalytic antibodies were identified by their capacity to release 3H-benzoic acid from 3H-phenyl cocaine. The 3B9 antibody was

Tie2 is a single-transmembrane, tyrosine kinase receptor ('Tie' stands for tyrosine kinase receptor with immunoglobulin and endothelial growth factor (EGF) homology domain(s)). Anti-Tie2 antibodies may be administered to enhance anglogenesis in mammals antibodies may be administered to enhance anglogenesis in mammals or of ther vascular disease, myocardial infarction or cerebral stroke or other vascular diseases such as diabetes. It may also be used to enhance endothelial cell survival and to promote haematopoietic or megakaryocyte cell proliferation (claimed).
identified using TSA1, which is an immunogenic conjugate of a phosphate monoester transition state analogue. Antibody 3B9 has a per minute Kcat of 0.11. The antibodies reduce the concentration of cocaine in a pubject, and are used particularly for the treatment of an overdose. They are also used for treating addiction (by reducing the in vivo concentration that can be achieved).
                                                                                                                                                                                                                                                                                                                                                     ë,

C242:II is a monoclonal murine Ab of IgG class produced when culturing in an appropriate medium a hybridoma cell line obtained by fusing spleen cells from a mouse, which has been immunised with a human colonic adenocarcinoma cell line, with the murine myeloma cell line Sp2/0. C242:II when bound to a cell surface antigen is capable of being endocytosed or

The antibodies neutralise CKDR activation. The immunoglobulin may be a multivalent single chain antibody, a diabody, a triabody, a diabody, a chimerised antibody, a diabody, a triabody, a monovalent single chain antibody, a diabody, a triabody in molecules bind specifically to an extracellular domain of the KDR receptor with the same affinity as VEGF. Overexpression of YEGF has been implicated in a number of human tumour cell lines including glioblastoma multiforme, hemangioblastoma, central nervous system neoplasms and ALDS associated Karposi's sarcoma. The antibodies therefore have applications in treating these conditions. This sequence encodes a preferred heavy chain complementary determining region of the immunoglobulins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Vascular endothelial growth factor receptor; VEGFR; antagonist; tumour; cytostatic; light chain hypervariable region; VL; myelocytic leukaemia; lymphCcytic; erythrocytic; monocytic; multiple myeloma; lymphoid cell; Hodgkin's disease; complementarity determining region-3; CDR-3; mouse.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel immunoglobulin molecules binding kinase insert domain-containing receptor with the same affinity as vascular endothelial growth factor, used to reduce tumour growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Humanised antibody murine light chain hypervariable region (VL) CDR3.

The invention relates to a method for inhibiting the growth of non-solid tumour cells that are stimulated by a ligand of vascular endothelial growth factor receptor (VEGFR) in mammals particularly humans. The method involves treating the mammals with humanised VEGFR monoclonal antibodies of antagonists). Humanised monoclonal antibody comprises humanised mouse variable region joined to human constant region, where the humanised mouse variable region contains mouse complementarity determining region (CDR) grafted into human variable region. The method is useful for treating leukaemias such as acute or chronic myelocytic leukaemia, acute or chronic lymphocytic leukaemia, erythrocytic or monocytic leukaemia, multiple myelomas and lymphoid cells, particularly those related to antibody murine light chain hypervariable region (VL) CDR-3 used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            IMC-1C11; chimeric antibody; mouse; human; antagonist; VEGF; vascular endothelial growth factor; angiogenesis; antiangiogenic; antitumour; neoplasm; collagen-vascular disease; autoimmune disease; tumour; breast carcinoma; lung carcinoma; prostate carcinoma; colon carcinoma carcinoma; neuroblastoma; glioblastoma multiforme; melanoma; therapy; light chain; CDR; complementarity determining region.

                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is that of complementarity determining region of 5 of the light chain variable region (see also AAB82702) of IMC-1C11, a mouse-human chineric antibody that has vascular endothelial growth factor (VBGF) antagonist activity. The antibody, or a fragment of it, can be used as an anti-anglogenic molecule, together with a chemotherapeutic acid, for the treatment of an angiogenic dependent condition in amamal, especially a human. The invention relates generally to a method of treating or controlling an angiogenic dependent condition by administering an anti-angiogenic molecule and a chemotherapeutic agent, to produce a controlling an angiogenic dependent condition while minimising or preventing significant toxicity of the chemotherapeutic agent. The anti-angiogenic molecule inhibits or blocks the action of a vascular endothelium survival factor such as VBGF or its receptor, and is especially IMC-1C11. Conditions that can be treated include a neoplasm, a colladen-vascular disease or an autoimmune disease, especially a solid tumour, including breast carcinoma, lung carcinoma, prostate carcinoma, coln carcinoma, prostate carcinoma, condinance and prevous system tumour, coln carcinoma, prostate carcinoma, covarian carcinoma, enterinema, cellagentema multiforme or melanoma (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    interactions is therefore the first interaction of interactions is therefore the first interactions is therefore the first interaction of macrophage associated inflammatory processes and in the treatment of diseases where suppression of antibody responses to antigens is prevention of call, The CD154 binding molecules are useful for prevention of call, tissue or organ graft rejection, in the prevention and treatment of autofimmune or inflammatory diseases, atheroselerosis or Alzheimer's disease, and also for inhibiting sell proliferation of B or B or all tolerance or inhibition of the growth of tumour calls expressing CD154 antigen. Such conditions include autoimmune and non-autoimmune disorders, in particular, Addison's disease, Celiac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is that of complementarity determining region 3 (CDR3) of the light chain variable region (VL, see also AAB82890) of mouse anti-human CD154 monoclonal antibody ABI793. The invention provides a CD154 binding molecule, in particular an antibody to ABI793 VH and the VI region has the CDR1, CDR2 and CDR3 of ABI793 VH and the VL region has the CDR1, CDR2 and CDR3 of ABI793 VL. The CD154 binding molecule is especially a human antibody in which the VH and VL domains are essentially those of ABI793, with constant regions from human heavy and light chains. The antibodies are used to inhibit an immune response mediated by CD154-Positive cell interactions with CD40-positive cells, in the treatment and/or modulation and/or interference with or inhibition of the CD154
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sprue, glomerulonephritis, Grave's disease, Hashimoto's thyroiditis, demonlytic disease of the newborn, Keratitis, multiple sclerosis, polymyositis, psoriasis, rheumatic fever, rheumatoid atrhritis, sarcoidosis, syphilis, tuberculosis, ulcerative colitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Complementarity determining region of light chain of antibody 2C4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAG63991-93 represent the complementarity determining regions (CDRs) of the light chain variable region of murine monoclonal antibody 2C4. This antibody binds to human sialoadhesin factor-2 (SAF-2). The antibody is useful for treating or preventing allergic rhinitis, allergies, asthma, anemia, eczema or diseases such as lymphoma, leukemia or systemic mastocytosis in a mammal. It is also useful for detecting the presence of a call, especially ecsinophil in a sample, by detecting binding of the antibody to SAF-2. The antibody can be coupled to toxins, antiproliferative drugs or radionuclides to kill cells in areas of excessive SAF-2 expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Complementarity determining region, CDR, CDRL3; antigen, cytostatic, anglogenesis inhibitor; vascular endothelial growth factor receptor; VBGF; tumour, leavemia, antibody; cell proliferation inhibitor; antibody light chain variable domain.
allergy; asthma; anemia; eczema; lymphoma; systemic mastocytosis;
leukemia; eosinophil.

The invention describes an antigen-binding protein (I) comprising a complex of two polypeptides (PI) and two second polypeptides (P2) which are stably associated in an immunoglobulin like complex. Pl has an antigen-binding site located to the N terminus of immunoglobulin (Ig) light chain constant domain (CL domain), and P2 has an antigen-binding site located to the N terminus of the CH1 domain. (I) is useful for:

CC site located to the N terminus of the CH1 domain. (I) is useful for:

CC reducing the activation of a vascular endothelial growth factor

CC (VEGF) receptor; reducing tumour growth; inhibiting angiogeneais;

CC reducing endothelial cell proliferation; inhibiting upgGF induced

CM migration of human leukaemia cells; blocking interaction of a protein and its ligand, promoting interactions between immune cells and target cells; and in vivo and in vitro for investigative, diagnostic or treatment companies. The design of (I) provides for efficient production so that substantially all of the antigen-binding proteins produced are assembled in the desired configuration. (I) is bivalent and bispecific, homogeneous compinement for provide other antibody functions can be present. There is no requirement for provessing in vitro to obtain the complete product. This peptide sequence represents the light chain variable domain companies or complementarity determining region 13 (CDRL3) incorporated into an extra antigen-binding protein described in the method of the invention.
                                                                                                                                                             New bispecific immunoglobulin-like antigen-binding protein for reducing tumour growth and for inhibiting angiogenesis, comprises a complex of two polypeptides and two second polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CDR; antibody;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mouse PAF receptor antibody light chain hypervariable region CDR3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Immunoglobulin light chain; hypervariable region; PAF; CDR; antiplatelet activating factor receptor; murine; chimeric; anti-PAF; complementarity determining region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAW39818-20 represent the sequences of the light chain complementarity determining regions (CDRs) of the catalytic antibody 6A12, which is able to degrade cocaine. A series of cocaine transition state analogues (TSAs) were prepared and used to immunise mice for production of hybridomas. Catalytic antibodies were identified by their capacity to release 3H-benzoic acid from 3H-phenyl cocaine. The 6A12 antibody was identified using TSA1, which is an immunogenic conjugate of a phosphate monoester transition state analogue. Antibody 6A12 has a per minute Kcat of 0.072. The antibodies reduce the concentration of cocaine in a
                                                                                                This sequence represents the complementarity determining region (CDR) 3 of the light chain hypervariable region of an antibody recognising the platelet activating factor (PAF) receptor. The variable region of mouse anti-PAF receptor monoclonal antibody is useful for the preparation of chimeric antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                   Variable domain; lambda light chain; catalytic antibody; degradation; cocaine; cocaine transition state analogue; TSA; benzoic acid; phenyl cocaine; immunogenic conjugate; reduction; cocaine; treatment;

subject, and are used particularly for the treatment of an overdose. They are also used for treating addiction (by reducing the in vivo concentration that can be achieved).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAW39824-26 represent the sequences of the light chain complementarity determining regions (CDRs) of the catalytic antibody 12H1, which is able to degrade cocaine. A series of cocaine transition state analogues (TSAs) were prepared and used to immunise mice for production of hybridomas. Catalytic antibodies were identified by their capacity to release 3H-benzoic acid from 3H-phenyl cocaine. The 12H1 antibody was identified using TSA2, and has a per minute Kcat of 0.16. The antibodies reduce the concentration of cocaine in a subject, and are used particularly for the treatment of an overdose. They are also used for treating addiction (by reducing the in vivo concentration that can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Variable domain, lambda light chain, catalytic antibody, degradation, cocaine, cocaine transition state analogue, TSA, benzoic acid, phenyl cocaine, immunogenic conjugate, reduction, cocaine, treatment;

A novel composition has been developed which comprises an immunoglobulin (Ig) having an affinity constant (Ka) of at least 2 multiply (100000000 M-1 for binding to a predetermined human antigen. The present sequence represents a human light chain CDR3 region peptide which forms part of an immunoglobulin comprising a VkL15 segment, and the present light chain CDR3 region. The articD4 antibodies may be used in therapeutic and diagnostic applications, especially for the treatment of human diseases. These antibodies reduce activity of CD4 cells and reduce undesirable autoimmune reactions, inflammatory response and transplant rejection. Transgenic animals are capable of producing heterologous antibodies of multiple isotypes by undergoing isotype switching. These animals of multiple isotypes by undergoing isotype switching. These animals conduce a first Ig type that is necessary for antigen-stimulated B-cell maturation and can switch to encode app produce one or more subsequent conducts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ద
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
Sequence 16, Application US/0996288

Patent No. US20020177126A1
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Young, James
APPLICANT: Young, James
APPLICANT: Lealie, Johnson
TITLE OF INVENTION: Methods of Adminstering/Dosing Anti-RSV Antibodies for Prophylaxi
TITLE OF INVENTION: and Treatment
FILE REFERENCE: 10271-047-999
CURRENT FILING DATE: 2001-11-28
NUMBER OF SEQ ID NOS: 259
SOFTMARE: Patentin version 3.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 11

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 7,
